13. ABSTRACT (Maximum 200 words) THIS REPORT PRESENTS THE FINDINGS OF THE FEASIBILITY STUDY (FS) SOIL VOLUME REFINEMENT PROGRAM (SVRP). THE SVRP COLLECTED AND ANALYZED SHALLOW SOIL DATA AT RMA FOR USE IN REFINING CONTAMINATED SOIL VOLUME ESTIMATES GENERATED IN THE FS. SAMPLING WAS CONFINED TO THE UPPER 10 FEET OF SOILS, OR TO THE WATER TABLE, WHICHEVER CAME FIRST. SAMPLING DID NOT EXTEND BELOW THE WATER TABLE. THE FOLLOWING APPENDICES ARE CONTAINED IN TWO SEPARATE VOLUMES; APPENDIX A- (DISKETTE), APPENDIX B- BOREHOLE LOGS. APPENDIX C- AUDIT REPORT, APPENDIX D- GEOPHYSICAL CLEARANCE PROGRAM, AND APPENDIX E- STATISTICAL ANALYSIS OF SOIL VERSUS RINSE BLANK DATA.

APPENDIX C

FEASIBILITY STUDY VOLUME REFINEMENT PROGRAM QUALITY ASSURANCE AUDIT REPORT

INTRODUCTION

The first Audit for the Feasibility Study Volume Refinement Program (VRP) was performed on March 1 through March 3, 1993 at RMA. The following discussion is on the results of the audit and includes the reported Findings and Observations.

PURPOSE

The purpose of the VRP Quality Assurance (QA) Audit was to provide Ebasco Services Incorporated (EBASCO) management with factual, documented, and objective information upon which they can make decisions concerning the adequacy and effectiveness of the procedures and work activities.

SCOPE

The scope of the VRP QA Audit was to evaluate field activities and operations, such as preparation, set-up, drilling, sampling, sample handling, and documentation occurring at the time of the audit.

OBJECTIVES

The objectives for the VRP QA Audit are as follows:

- Document activities and operations being performed
- Determine compliance or noncompliance with procedures
- Evaluate and assess the adequacy and effectiveness of the procedures
- Determine needs for improvement
- Obtain sufficient evidence to draw conclusions relevant to the objectives

DETAILS OF AUDIT PLAN
AUDIT PERSONNEL

The Audit was performed by the following EBASCO personnel:

Anthony D. Palizzi	Lead Auditor
George S. Ballard	Auditor
Deborah D. Wilson	Auditor

AUDIT DATES

The Audit was performed on the following dates:

Friday February 26, 1993:	Pre-Audit Briefing
Monday March 1, 1993 and	
Tuesday March 2, 1993:	Preparation
	Set-up
	Drilling, Soil Sampling, Sample Handling
	Evaluation of findings
Wednesday March 3, 1993:	Documentation
Friday March 13, 1993:	Post-Audit Briefing

PROCEDURES

The following procedures were used to perform the Audit:

- Quality Assurance Management Plan (Final)*
- VRP Quality Assurance Project Plan (Draft Final)*
- PMRMA Chemical Quality Assurance Plan:
 - Supplement No. 93-1 (Draft), Packing of Environmental Samples*
- VRP Work Plan (Draft Final):
 - Technical Plan*
 - Waste Management Plan*
 - Data Management Plan*
- Standard Operating Procedures:
 - NO. 2, Soil Sampling Using Continuous Core Hollow-stem Augers
 - NO. 6, Waste Management*

***NOTE:** Only certain sections of this procedure were evaluated. The evaluation was based on the work being performed at the time of the Audit.

FINDINGS AND OBSERVATIONS

A list of findings and observations plus Nonconformance Reports (NCR) and Corrective Action (CA) Requests are included in Attachment I.

DEFINITIONS

Finding: A documented result of an audit identifying a nonconformance supported by sufficient evidence to facilitate corrective action taken by the audited organization.

Observation: An event examined, or item detected, which does not fall into the category of a nonconformance of finding, but warrants comment.

Corrective Action: Measures taken to remedy conditions adverse to quality and preclude repetition.

FINDINGS:

A total of 27 Findings were documented.

OBSERVATIONS:

A total of 4 Observations were documented.

RECOMMENDATION FOR IMPROVEMENTS

Correct and complete to Procedures to accurately reflect current work activities.

AUTHORIZATIONS

Anthony D. Palizzi

George S. Ballard

Deborah D. Wilson

ATTACHMENT I

**NONCONFORMANCES, FINDINGS, OBSERVATIONS,
AND CORRECTIVE ACTIONS**

FINDINGS AND OBSERVATIONS

DEFINITIONS:

FINDING: A documented result of an audit which identifies a nonconformance supported by sufficient evidence to facilitate corrective action taken by the audited organization.

OBSERVATION: An event examined, or item detected, which does not fall into the category of a nonconformance or finding, but warrants comment.

CORRECTIVE ACTION: Measures taken to remedy conditions adverse to quality and preclude repetition.

STANDARD OPERATING PROCEDURE (SOP) NO. 2, SOIL SAMPLING USING CONTINUOUS CORE HOLLOW-STEM AUGERS

STANDARD OPERATING PROCEDURE (SOP) NO.5, GEOPHYSICAL CLEARANCE OF BOREHOLE AND SURFICIAL SOIL SAMPLING LOCATIONS

DRAFT FINAL TECHNICAL PLAN FOR FEASIBILITY STUDY VOLUME REFINEMENT PROGRAM Version 3.0

DRAFT FINAL QUALITY ASSURANCE PROJECT PLAN FOR FEASIBILITY STUDY VOLUME REFINEMENT PROGRAM Version 3.0

DRAFT FINAL QUALITY ASSURANCE MANAGEMENT PLAN

SOP NO. 2

FINDINGS

Requirement: SOP 2, page 2, Section 3.1, EQUIPMENT... "The following is a list of borehole sampling equipment for each rig":

Standard 2-foot (ft) core barrels

Finding: Standard 5-ft core barrels used

FINDINGS CONTINUED

Requirement: SOP 2, page 3, bullet 19, Daily Summary of Activities Form

Finding: Form denotes "Shift Accomplishments"

Requirement: SOP 2, page 4, BORE LOG FORM: reviewed for completion and consistency.

Finding: Site type not completed on all Bore Log Forms checked
Signature and Date was not completed (only initials) on all agent hole Bore Log Forms
QA/QC signature not completed on all Bore Log Forms
Color code reported as N/A on agent hole Bore Log Forms

Requirement: SOP 2, page 6, Section 3.2.1, DRILLING PROCEDURES... "The following information will be contained on the Bore Log Form at a minimum:..." (see list on page 6).

Finding: The following information was not on the Bore Log Form:

Task Name
Task Number
Air Monitoring Measurements
Ground Elevation
Sample Types
Sample Depths and time
Drilling Observations
Other Pertinent Information

Requirement: SOP 2, page 7, Section 3.1, EQUIPMENT... "The following is a list of borehole sampling equipment for each rig:

Stainless steel bowls and glass funnels

Finding: Glass funnels not used.

FINDINGS CONTINUED

Requirement: SOP 2, page 7, Section 3.1, EQUIPMENT... "The following is a list of borehole sampling equipment for each rig:

Sample bottles (1 liter amber wide-mouth glass containers with teflon-lined lids.

Finding: 250 milliliter bottles used.

Requirement: SOP 2, page 9, Section 3.1, EQUIPMENT... "The following is a list of borehole sampling equipment for each rig:

Core boxes

Finding: Core boxes not used.

Requirement: SOP 2, page 9, Section 3.1, EQUIPMENT... "The following is a list of borehole sampling equipment for each rig:

Coding forms (Figure 4)... Figure 4 (Coding Form) is exhibited on page 10

Finding: Did not observe any coding forms utilized, or present in the field files.

Finding: Figure is titled "Data Entry Form", and not "Coding Form".

Requirement: SOP 2, page 13, Section 3.2.2, "Detailed sample information is addressed in the Technical Plan."

Finding: SOP 2 is inadequate as the statement does not inform the user "where in the Technical Plan the sample information is found".

FINDINGS CONTINUED

Requirement: SOP 2, page 14, Section 3.2.2, "Sampling Procedures"

"If a sample for RMA screening is required for the location, collect a total of 50 grams of material from each end of the core using a clean stainless steel putty knife and then place the material in a baggie." AND

Requirement: TECHNICAL PLAN (TP), page 3-35, Section 3.4.3,
Item 2., "Scrape a minimum of 50 grams of soil from the entire length of the unlined sample or from the ends of the polybutyrate tube sample into a plastic ziploc bag."
Item 3, "Complete and attach sample tag to plastic bag."

Finding: Samples were taken using different methods. One sample was taken by dumping the core into a stainless bowl, mixing the core, then scooping out the sample. Another sample was taken by scooping soil from the core at random intervals prior to placing it into a bowl.

Finding: Samples were not taken by scraping the entire length.

Finding: The Technical Plan & the SOP do not agree on the sample-taking method.

Finding: Samples were placed in a bottle, not a plastic bag.

Requirement: SOP 2, page 15, Section 3.2.2, "Previous experience... 2-ft continuous sampling runs provide the best core recovery."

Requirement: TP, page 3-34, Borehole Sampling... "Typically, the soil samples will be collected in an unlined core barrel at 2-ft intervals."

Finding: Standard 5-foot (ft) continuous sampling runs are being used.

Requirement: SOP 2, page 20, Section 6.1, FIELD NOTES: The information in the field book will include the following as a minimum: (see list on page 20):

Finding: The following information was not in the field logbooks:

- Site and Sample ID numbers
- Description of samples
- Sampling method
- Drilling observations

FINDINGS CONTINUED

Requirement: SOP 2, page 16, Section 3.2.3, "The grout will be composed of Type II...in a ratio of 4.7 pounds... per 94-pound sack... maximum of 8 gallons pre-approved ground water."

Finding: No documentation, or measurements accurate enough to verify the proportions listed in this SOP were accurately followed.

Requirement: SOP 2, page 16, Section 3.2.3, "All PPE and waste generated at the bore hole will be drummed and left at the location until cleared by LSD laboratory."

Finding: PPE not left at the location.

Requirement: SOP 2, page 17, Section 4.0, "All QA/QC samples... with QA/QC identification numbers... analysis."

"Details are provided in the... QAPP."

Finding: No definition of QA/QC identification numbers can be found in this SOP, the QAMP, or the QAPP.

Finding: Statement doesn't identify where in the QAPP the details are provided.

SOP NO. 5

FINDINGS

Requirement: SOP 5, page 15, Section 5.3, FIELD PROCEDURES: "At a minimum, the heading for each data sheet...." (see list on page 15)

Finding: The following information was not included on the data sheet:

Site identification

Location

TECHNICAL PLAN (TP):

FINDINGS

Requirement: TP, page 3-46, Section 3.5.3, QA/QC Samples, "The field duplicate sample... by splitting the soil sample from the core barrel into two separate sample containers."

Requirement: SOP 2, page 15, Section 3.2.2, "If a duplicate... divide the sample in half lengthwise in the core barrel...sample bottle."

Finding: Instructions are unclear. Field duplicate samples are being taken using different methods. In one case, the entire core is placed in a bowl, mixed, and then each sample is scooped out. In the second case, the sample is scraped from the length of the core, mixed in a bowl, and a sample taken, the process is then repeated for the duplicate.

Requirement: TP, page 3-46, Section 3.5.3, QA/QC Samples,... "Approximately three liters of... and collected in sample containers."

Requirement: SOP 2, page 17, Section 4.1, Field Rinsate Samples... "Approximately three liters of... and collected in a large decontaminated stainless steel bowl."

Finding: Instructions are conflicting.

Finding: Rinsate samples are not collected in a bowl prior to taking the sample.

Requirement: TP, page 3-50, Section 3.6.1:
"Position 6 contains an alpha character ... sample type."
"These... are:" blank, D, R, T, and A.

Finding: Rinse blank samples were taken and recorded without the "R" designation, and RMA laboratory samples were missing the "A" designation.

FINDINGS CONTINUED

Requirement: TP, page 51-52, Section 3.6.4, LOGBOOKS: "The information in the field logbooks will include the following as a minimum": (see list on page 51)

Finding: The follow' - information does not match SOP 2 and was not included in the field logbook:

Sample location details

Date and Time of sample collection

Sample depth intervals

QUALITY ASSURANCE MANAGEMENT PLAN (QAMP)

FINDINGS

Requirement: QAMP, Section A-3, page 1, Subsection 2.1.1.1, "Specialized training requirements needed..."

Finding: Certain personnel working on site have not received Quality Assurance Training.

OBSERVATIONS

Requirement: TP, page 3-46, Section 3.5.2, "All soil samples will be preserved by cooling to 4° C in ice chests with blue ice." Several places in the TP and the SOP indicate placing samples in ice chests with blue ice.

Observation: TP, page 3-35, item 5, on the list, "Cool to 4 degrees Celsius (°C)". This should be changed to include "in ice chests with blue ice." as stated above to prevent potential confusion, and add consistency to the TP.

Requirement: SOP 2, page 14, bullet 3, "Seal, label, and store..."

Observation: This should read, "Custody seal, and sample tag..."

Requirement: SOP 2, page 4, Bore Log Form: "Sample number", "Site ID", and "Site Type"

Observation: Sample number should be Sample Tag Number
Site ID and Site Type should be further defined to match what is mentioned in the Data Management Plan.

Requirement: Field Files

Observation: The following information was not observed in the Field Files:

Health and Safety Notes
Geophysical Clearance Information
Survey Information

FEASIBILITY STUDY VOLUME REFINEMENT PROGRAM QUALITY ASSURANCE AUDIT REPORT

INTRODUCTION

The second Audit for the Feasibility Study Volume Refinement Program (VRP) was performed on May 26 through May 28, 1993 at RMA. The following discussion is on the results of the audit and includes the reported Findings and Observations.

PURPOSE

The purpose of the VRP Quality Assurance (QA) Audit was to provide Ebasco Services Incorporated (EBASCO) management with factual, documented, and objective information upon which they can make decisions concerning the adequacy and effectiveness of the procedures and work activities.

SCOPE

The scope of the VRP QA Audit was to evaluate field activities and operations, such as preparation, set-up, drilling, sampling, sample handling, and documentation occurring at the time of the audit.

OBJECTIVES

The objectives for the VRP QA Audit are as follows:

- Document activities and operations being performed
- Determine compliance or noncompliance with procedures
- Evaluate and assess the adequacy and effectiveness of the procedures
- Determine needs for improvement
- Obtain sufficient evidence to draw conclusions relevant to the objectives

DETAILS OF AUDIT PLAN

AUDIT PERSONNEL

The Audit was performed by the following EBASCO personnel:

Anthony D. Palizzi Lead Auditor
George S. Ballard Auditor

AUDIT DATES

The Audit was performed on the following dates:

Wednesday May 26, 1993 through May 28, 1993

PROCEDURES

The following procedures were used to perform the Audit:

Quality Assurance Management Plan (Final)*
VRP Quality Assurance Project Plan (Draft Final)*
PMRMA Chemical Quality Assurance Plan:
 Supplement No. 93-1 (Draft), Packing of Environmental Samples*
VRP Work Plan (Draft Final):
 Technical Plan*
 Data Management Plan*
 Standard Operating Procedures:
 NO. 1, Topographic Surveying
 NO. 2, Soil Sampling Using Continuous Core Hollow-Stem Augers
 NO. 3, Surficial Soil Sampling

*NOTE: Only certain sections of this procedure were evaluated. The evaluation was based on the work being performed at the time of the Audit.

FINDINGS AND OBSERVATIONS

A list of findings and observations plus Nonconformance Reports (NCR) and Corrective Action (CA) Requests are included in Attachment I.

DEFINITIONS

Finding: A documented result of an audit identifying a nonconformance supported by sufficient evidence to facilitate corrective action taken by the audited organization.

Observation: An event examined, or item detected, which does not fall into the category of a nonconformance of finding, but warrants comment.

Corrective Action: Measures taken to remedy conditions adverse to quality and preclude repetition.

FINDINGS:

A total of 7 Findings were documented.

OBSERVATIONS:

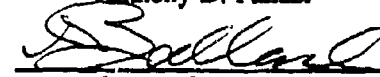

None.

RECOMMENDATION FOR IMPROVEMENTS

Administer appropriate corrective action to Findings.

AUTHORIZATIONS

Anthony D. Palizzi

ATTACHMENT I

NONCONFORMANCES, FINDINGS, AND OBSERVATIONS,

FINDINGS AND OBSERVATIONS

AS REQUIRED BY THE QUALITY ASSURANCE MANAGEMENT PLAN (QAMP), A FOLLOW-UP ON CORRECTIVE MEASURES TAKEN TO REMEDY NONCONFORMANCES NOTED ON THE PREVIOUS AUDIT HAS RESULTED IN THE FOLLOWING NONCONFORMANCES:

Requirement: QAMP, Section A-3, paragraph 1.0, first sentence... "All levels of ... management are responsible to ensure EBASCO and subcontractor personnel are trained...", and QAPP, Section A-3, paragraph 1.1, "All training... to the requirements of the QAMP and QAPP."

Finding: Several personnel working on the project have not received the required QAMP and QAPP training. Quality Assurance has provided the names to management, and no action has been taken by management to secure the training.

Requirement: QAMP, Section B-2, paragraph 3.3.10... "Procedure changes are submitted... using the Procedure Change Request (PCR)..."

Finding: No evidence that all of the current proposed changes to the affected SOPs have been submitted on the PCR as required.

Requirement: QAMP, Section B-5, paragraph 3.15.1.3, steps 1.) and 2.), "Nonconforming... dispositions" (see paragraph 3.15.1.6) "are proposed and approved by responsible management....", and items 7. and 8. of the NCR instructions on the back of the NCR form. "(7.) (the disposition); "(8.) Responsible Manager Signature/ Date: _____"

Finding: Responsible management had not completed this portion of the NCR process by the time of the follow-up audit.

FINDINGS CONTINUED

Requirement: QAMP, Section B-5, paragraph 3.15.1.3, steps 1.) and 2.), "Nonconforming... dispositions" (see paragraph 3.15.1.6) "are proposed and approved by responsible management and the QA Manager.", and items 10. and 11. of the NCR instructions on the back of the NCR form. "(10.) Corrective Action Request Needed (QA Manager) Yes:____ No:____ "(11.) QA Manager Signature and Date:_____"

Finding: QA Management had not completed this portion of the NCR process by the time of the follow-up audit.

Requirement: QAPP, Section B-5, paragraph 1.2.2... "The QA Manager or his designee and an EBASCO chemist attends each laboratory audit..."

Finding: No evidence the QA Manager or a designee has attended any of the several laboratory audits already conducted by the EBASCO chemist.

FINDINGS CONTINUED

QUALITY ASSURANCE PROJECT PLAN (QAPP) - VRP

Requirement: QAPP, Section A-9, paragraph 1.1, third sentence "These QA reports are provided at a minimum on a monthly basis."

Finding: QA Management had not provided management any reports by the time of the audit.

Requirement: QAPP, Section B-5, paragraph 1.2.1. "For the VRP, field surveillance is conducted twice per month during field activities."

Finding: No surveillances have been conducted.

SUBJECT: Feasibility Study Volume Refinement Program Quality Assurance Audit Report,
Number 2

The second Audit for the Feasibility Study Volume Refinement Program (VRP) was performed on May 26 through May 28, 1993 at RMA. The following discussion is on the results of the audit and includes the reported findings and observations.

PURPOSE

The purpose of the VRP Quality Assurance (QA) Audit was to provide Ebasco Services Incorporated (EBASCO) management with factual, documented, and objective information upon which they can make decisions concerning the adequacy and effectiveness of the procedures and work activities.

SCOPE

The scope of the VRP QA Audit was to evaluate field activities and operations, such as preparation, set-up, drilling, sampling, sample handling, and documentation occurring at the time of the audit.

OBJECTIVES

The objectives for the VRP QA Audit are as follows:

- o Document activities and operations being performed
- o Determine compliance or noncompliance with procedures
- o Evaluate and assess the adequacy and effectiveness of the procedures
- o Determine needs for improvement
- o Obtain sufficient evidence to draw conclusions relevant to the objectives

EBASCO Rev. 12/18/92

FEASIBILITY STUDY VOLUME REFINEMENT PROGRAM QUALITY ASSURANCE AUDIT REPORT

INTRODUCTION

The third Audit for the Feasibility Study Volume Refinement Program (VRP) was performed on August 12, 1993. This Audit was conducted as a follow up to the first two Audits performed March 1 through March 3, 1993 and May 26 through May 28 at RMA. The following discussion describes the results of the Audit and includes one Procedure Change Request.

PURPOSE

The purpose of the VRP Quality Assurance (QA) Follow-up Audit was to provide Ebasco Services Incorporated (EBASCO) management with factual, documented, and objective information concerning Nonconformance responses generated as a result of the first two Audits.

SCOPE

The scope of the VRP QA Follow-up Audit was to review the results of the first two Audits and evaluate the responses to the six Nonconformance Report Forms generated to determine if appropriate corrective actions were implemented. The first two Audits evaluated field activities and operations, such as preparation, set-up, drilling, sampling, sample handling, and documentation occurring at the time of the audit.

OBJECTIVES

The objectives for the VRP QA Follow-up Audit are as follows:

- * Review Nonconformance Report Forms generated as a result of the first two Audits
- * Review Procedure Change Requests generated in response to the Nonconformance Reports
- * Determine if appropriate corrective actions have been implemented

AUDIT PERSONNEL

The Audit was performed by the following EBASCO personnel:

Anthony D. Palizzi Lead Auditor
George S. Ballard Auditor

AUDIT DATE

The Follow-up Audit was performed on August 12, 1993.

PROCEDURES

The following procedures were used to perform the Audit:

Quality Assurance Management Plan (Final)*
VRP Quality Assurance Project Plan (Draft Final)*
PMRMA Chemical Quality Assurance Plan:
 Supplement No. 93-1 (Draft), Packing of Environmental Samples*
VRP Work Plan (Draft Final):
 Technical Plan*
 Waste Management Plan*
 Data Management Plan*
 Standard Operating Procedures:
 No. 2, Soil Sampling Using Continuous Core Hollow-stem Augers
 No. 6, Waste Management*

*NOTE: Only certain sections of this procedure were evaluated. The evaluation was based on the work being performed at the time of the Audit.

FINDINGS AND OBSERVATIONS

The Procedure Change Request generated is included in Attachment I.

DEFINITIONS

Finding: A documented result of an audit identifying a nonconformance supported by sufficient evidence to facilitate corrective action taken by the audited organization.

Observation: An event examined, or item detected, which does not fall into the category of a nonconformance of finding, but warrants comment.

Corrective

Action: Measures taken to remedy conditions adverse to quality and preclude repetition.

RECOMMENDATION FOR IMPROVEMENTS

The Nonconformance responses have been reviewed and the appropriate corrective action implemented. The first and second QA Audits performed for the Feasibility Study Volume Refinement Program have been closed out.

PROCEDURE CHANGE REQUEST FORM

PCR No.: 005

Page 1 of 1

Procedure No. Feasibility Study Volume Refinement Program Quality Assurance Project Plan

Procedure Change Requested: Yes

DESCRIPTION

1. Current Description: (Include SOP No., Page(s), Paragraph No., etc.)

1. QAPP, Section B-5, paragraph 1.2.2: "The QA Manager or his designee and an EBASCO chemist...attend each laboratory audit..."
2. QAPP, Section B-5, paragraph 1.2.1: "For the VRP field surveillance is conducted twice per month during field activities."

2. Recommended Change:

1. Change to: "The QA Manager will designate an EBASCO chemist..."
2. Change to: "No field surveillance will be conducted for the VRP."

3. Initiator Signature/Date:

Anthony D. [Signature] 8/4/93

4. QA Manager Signature/Date:

Anthony D. [Signature] 8/4/93

5. Responsible Project Manager:

[Signature] 8/9/93

6. Reason For Change: NCRVRP006

RESOLUTION

7. Is change implemented? Yes: X No:
8. If yes, attach procedure and mark Procedure Change Notice.

APPROVAL

9. QA Manager Signature/Date:

[Signature] 8-9-93

10. Program Manager Signature/Date:

[Signature] 8-12-93

NOTE: All appropriate signatures/dates must be obtained prior to disposition.

Procedure No. SOP 2, Soil Sampling using Continuous Core Hollow Stem Augers

Procedure Change Requested: Yes

DESCRIPTION

1. Current Description: (Include SOP No., Page(s), Paragraph No., etc.)

1. SOP 2, page 2, Section 3.1, EQUIPMENT... "The following is a list of bore hole sampling equipment for each rig":
2. SOP 2, page 3, Bullet 19... "Daily Summary of Activities Form"
3. SOP 2, page 7, Bullet · Stainless steel bowls and glass funnels
4. SOP 2, page 7, Bullet · Sample bottles (1 liter amber...)
5. SOP 2, page 12, Bullet · Air monitoring measurements

2. Recommended Change:

1. Add "5 Ft. Core Barrel" to the list of equipment.
2. Delete reference to form.
3. Delete "and glass funnels", and add the word (Optional) after bowls.
4. Delete "1 liter", and replace with "250 ml".
5. Delete entire bullet.

3. Initiator Signature/Date: Def. B. 7-21-93 4. QA Manager Signature/Date: Anthony Salas 7/19/93 5. Responsible/Project Manager: James A. Fiske 7/21/93

6. Reason For Change: NCRVRP001

RESOLUTION

7. Is change implemented? Yes: X No:
8. If yes, attach procedure and mark Procedure Change Notice.

APPROVAL

9. QA Manager Signature/Date: Anthony Salas 7/21/93

10. Program Manager Signature/Date: Mark H. 7/22/93

NOTE: All appropriate signatures/dates must be obtained prior to disposition.

PROCEDURE CHANGE REQUEST FORM

PCR No.: 001

Page 2 of 5

Procedure No. SOP 2, Soil Sampling using Continuous Core Hollow Stem Augers

Procedure Change Requested: Yes

DESCRIPTION

1. Current Description: (Include SOP No., Page(s), Paragraph No., etc.)

6. SOP 2, page 13, paragraph 3.2.2, second sentence, "... is addressed in the Technical Plan."
7. SOP 2, page 15, first bullet, "Commence... coring. Previous experience... recovery."
8. SOP 2, page 15, second bullet, "If a sample for RMA screening is required, collect a total of 50 grams of material from each end of the core using a clean stainless-steel putty knife and then place the material in an approved sample bottle."

2. Recommended Change:

6. Change to read "... is addressed in section 3.4.3 of the Technical Plan."
7. Add to end of sentence: "recovery ,but when better than 85% recovery is expected, a 5 foot core sample barrel may be used at the discretion of the rig geologist and field operations leader."
8. Change to the following: "If a sample for RMA screening is required, collect approximately 50 grams of material from the entire length of the unlined sample core using a clean stainless-steel putty knife, then place the material in an approved sample bottle, and in a sealable plastic bag." These methods will be the only methods used for collecting soil samples by the sampling personnel.

3. Initiator Signature/Date: Anthony D. [Signature] 7-21-93

PROCEDURE CHANGE REQUEST FORM

PCR No.: 001

Page 4 of 5

Procedure No. SOP 2, Soil Sampling using Continuous Core Hollow Stem Augers

Procedure Change Requested: Yes

DESCRIPTION

1. Current Description: (Include SOP No., Page(s), Paragraph No., etc.)

11. SOP 2, page 16, second bullet, "The grout will be composed of Type II portland cement and bentonite powder in a ratio of 4.7 pounds of powder per 94-pound sack of cement mixed with a maximum of 8 gallons of pre-approved water. All materials will combined in an above-ground rigid container or mixer and either mechanically or manually blended on site to product a thick, lump-free mixture."
12. SOP 2, page 16, fourth bullet, "All PPE and waste generated at the bore hold will be drummed and left at the location until cleared by the LSD laboratory."

2. Recommended Change:

11. Change to: "The grout will be composed of Type I or Type II portland cement and bentonite powder in a ratio of approximately 4.7 pounds of powder per 94-pound sack of cement mixed with approximately 5 to 8 gallons of pre-approved water. A measuring cup and 5 gallon bucket will be used in the field, and noted in the log book. All materials will combined in an above-ground rigid container or mixer and either mechanically or manually blended on site to product a thick, lump-free mixture."
12. Change to: "All PPE and waste generated at the bore hold will be drummed and left at the location until cleared by the LSD laboratory if there is an indication of a detection of Army Materials by the Minicam. Otherwise, all drums may be brought out of the field to a designated holding area."

APPENDIX D

Table D-1 shows that 57 boreholes were relocated due to the possible presence of subsurface hazards. Seven drilling locations were moved because surface metal such as railroad tracks, metal fences, or pipes, was effecting the induction readings and thus possibly masking buried hazards. The other 50 boreholes were relocated because of possible buried hazards such as underground utilities, culverts, or buried debris.

In addition to EMI, GPR surveys were used to clear eight borehole locations. These boreholes were located close to cultural features such as concrete walls or pads, railroad tracks, or buildings. EMI surveys at these locations also indicated the presence of underground utilities very near the staked location. GPR was used to further delineate the location of the utilities and to ensure clearance at the drilling location. GPR surveys were conducted in these areas using either a 100 megahertz (MHz) bistatic, 300 MHz, or 500 MHz antennas. At a particular site, choice of antenna was based on its ability to penetrate to a depth of at least 10 ft. All antennas used were shielded to reduce interference from nearby buildings or power lines.

STATISTICAL ANALYSES OF SOIL VERSUS RINSE BLANK DATA

Various statistical methods can be used to determine whether a correlation exists between the contaminant concentrations observed in soil samples from borings drilled immediately before and after the collection of the rinse blanks. The simplest method is the construction of scatter plots that give a visual impression of how strongly the values of x are related to the values of y with which they are paired. Scatter plots were prepared for pairings of the maximum contaminant concentration in soil samples from preceding borings (x) to contaminant concentrations in the rinse blank (y), and for pairings of the rinse blank concentrations (x) to maximum contaminant concentrations in soil samples from the following boring (y). Examination of these scatter plots do not readily indicate any correlation (Figure E-1).

Numerical measures of how strongly the soil contaminant levels and rinse blank levels are related, also known as correlation coefficients, were also developed. Two types of correlation coefficients were calculated: Pearson's correlation coefficient and Spearman's Rank correlation coefficient (Table 2.6-3). The Pearson's correlation coefficient, r, is given by:

$$r = \frac{\sum (x - \bar{x})(y - \bar{y})}{(n-1)s_x s_y}$$

where: x = maximum contaminant concentration in soil sample from preceding boring or in the rinse blank, depending on whether correlation of previous bore to rinse blank, or rinse blank to subsequent bore, is being evaluated

\bar{x} = sample mean for x values

y = maximum contaminant concentration in rinse blank or in soil sample from boring immediately after rinse blank

Table E-1 Statistical Correlation Between Soil and Rinse Blank Contaminant Concentrations

Contaminant	Previous Boring Max. Conc. to Rinse Blank				Following Boring Max. Conc. to Rinse Blank			
	Pearson's		Spearman's Rank		Pearson's		Spearman's Rank	
	n	Correlation Coefficient	n	Correlation Coefficient	n	Correlation Coefficient	n	Correlation Coefficient
Aldrin	11	-0.24 weak, negative	5	-0.30 weak, negative	11	0.996 strong, positive	5	0.40 weak, positive
Arsenic	57	-0.38 weak, negative	48	-0.12 weak, negative	57	-0.32 weak, negative	47	-0.29 weak, negative
Chlordane	6	-0.35 weak, negative	3	1.00 strong, positive	6	-0.10 weak, negative	3	0.50 weak, positive
CL6CP	6	-0.26 weak, negative	1	(a)	6	1.16 not valid	1	(a)
Dieldrin	17	-0.16 weak, negative	15	-0.29 weak, negative	17	-0.16 weak, negative	16	-0.04 weak, negative
Endrin	11	-0.30 weak, negative	6	0.77 moderate, positive	11	-0.43 weak, negative	5	0.20 weak, positive
Isodrin	9	-0.21 weak, negative	2	(a)	9	0.43 weak, positive	2	(a)
Mercury	19	-0.13 weak, negative	3	-1.00 strong, negative	19	0.004 weak, positive	4	-0.80 strong, negative
MPA	15	-0.57 moderate, negative	1	(a)	15	-0.41 weak, negative	1	(a)
PPDDE	7	-0.29 weak, negative	1	(a)	7	-0.21 weak, negative	2	(a)
PPDDT	8	1.07 not valid	2	(a)	8	0.79 moderate, positive	2	(a)

(a) - Insufficient number of ranked pairs to determine correlation coefficient.

\bar{y} = sample mean for y values
 n = number of sample pairs
 s_x = standard deviation for x values
 s_y = standard deviation for y values

Pearson's correlation coefficient does not depend on the unit of measurement for either variable. It is a measure of the extent to which the variables are linearly related. For purposes of this study, results less than CRLs were assigned values of zero.

Spearman's Rank correlation coefficient is a measure of the two variables' linear or nonlinear relationship. Unlike the Pearson's correlation coefficient, the Spearman's Rank correlation coefficient is not very sensitive to outlying points. Spearman's Rank correlation coefficient is determined by assigning a rank to each x and y variable from the lowest value to the highest, i.e., the lowest x value receives a rank of 1 while the next highest number receives a rank of 2, and so on. If either the rinse blank or associated soil concentration was below the CRL, the pair was not included in the calculation of the Spearman's Rank correlation coefficient. The rank pairs were used to develop a correlation coefficient using a modified Pearson's method. The Spearman's Rank correlation coefficient, r_s , is given by:

$$r_s = \frac{\sum [x \text{ rank} - (\frac{n+1}{2})] [y \text{ rank} - (\frac{n+1}{2})]}{n(n-1) (n+1) / 12}$$

where: x rank = rank of contaminant concentration in soil sample from boring preceding rinse blank or in rinse blank

y rank = rank of contaminant concentration in rinse blank or from boring immediately after rinse blank

n = number of ranked pairs

The elimination of pairs with less than CRL values reduced the number of Spearman's Rank correlation coefficients that could be calculated. If a contaminant had less than 3 pairs, the Spearman's Rank correlation coefficient was not determined. Coefficients determined for less than 5 pairs are also suspect.

The value of the correlation coefficients for both methods vary between -1 and 1. A positive value indicates a positive relationship between the variables, i.e., when x increases y increases. A negative value indicates a negative relationship, i.e., when x decreases y increases.

When the correlation coefficient equals 1, the strongest positive relationship exists between x and y, while -1 indicates the strongest negative relationship. A rule of thumb is to assume that a strong relationship exists if the correlation coefficient is $> +0.8$ or < -0.8 , a weak relationship if the correlation coefficient is between $+0.5$ and -0.5 , and moderate otherwise (Devore and Peck 1986).

For the most part, the calculated correlation coefficients indicate weak negative relationships between the rinse blank concentrations and soil concentrations. The few strong positive relationships (aldrin in subsequent bore to rinse blank, chlordane in previous bore to rinse blank) were isolated incidents not confirmed by both Pearson's and Spearman's Rank tests. In fact, for chlordane the two tests contradict each other. Mercury, by way of contrast, showed strong negative correlations under Spearman's Rank test for both cases (prior to rinse and rinse to subsequent bores). In general, these correlation analyses indicate that rinse blank detections are not related to prior subsequent sample concentrations and not indicative of failures in the decontamination procedures.
